[REDACTED] December 2003

Dear Sir/Madam

I am writing to say that my father suffered from breathlessness for some time before he died but unfortunately he was most reluctant to see a doctor and was not treated for his ailments. Unfortunately at the time my mother and myself were ignorant of the possible causes of his condition and my father said most [REDACTED] had similar conditions and it went with the job.

Although his death certificate states [REDACTED] stenosis and adenoma his lungs were tested, as he had been a [REDACTED] miner. I attended the post mortem/results of the inquest and it was stated that he did have coal dust in his lungs.

Yours faithfully
